

Laboratory Support for the International Marketplace

TestAmerica partners with clients to provide international analytical testing support on six continents. Our international experience includes work with clients in the Middle East, Central Africa, Asia, the Pacific Rim, and nearly every country in the Caribbean and Latin America. Through engaged partnerships with clients in both the public and private sectors, TestAmerica has provided services for a number of environmental projects, including:

- On-site Assessments
- Property Transfers
- Groundwater Monitoring Programs
- Industrial Hygiene Monitoring
- Drinking Water Programs

Laboratory support for international sampling efforts goes beyond analytical testing offerings. TestAmerica has a unique understanding of the challenges associated with international sampling, including logistical concerns, certifications and/or accreditations, and the deliverable requirements of many international projects.

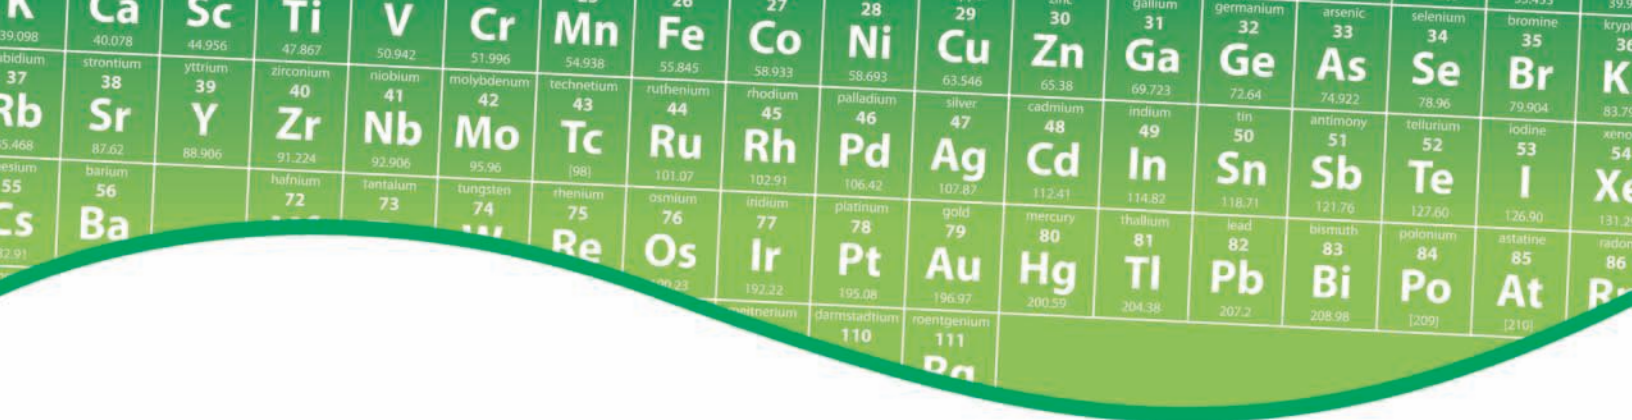

TestAmerica's Analytical Offerings

TestAmerica offers a full suite of testing in soil, water, wastewater, drinking water, air and sediment matrices. Our industry leading analytical portfolio includes

routine analyses such as volatiles, metals and PCBs. In addition, TestAmerica also offers many specialty services including ambient air testing, PFASs, explosives, dioxins/furans, PCB congeners and industrial hygiene testing.

Highlights of our analytical offerings and solutions for international projects include:

- Analysis of sediment samples from a Mexican oil and gas block lease in the Gulf of Mexico for forensic hydrocarbons - aPAHs, Saturated TPHs, and Biomarkers.
- Explosives/energetics testing for former military sites in Israel in support of a new housing development.
- Radiochemistry testing of samples from Brazilian mining interests and oil and gas companies in the Middle East.
- Analysis of air samples for NIOSH Method 6013 from Slovenia under our AIHA Laboratory Accreditation.
- Year-long water quality study in Southern Iraq, analyzing over 1,500 samples shipped from Basra, Iraq to the U.S.

TestAmerica's Logistical Support

Effectively managing international shipments of field supplies and samples, to and from foreign countries, can be a critical factor to the success of an international sampling event. TestAmerica leverages its decades of experience with international shipping, as well as the relationships developed with multinational shipping and logistics companies, to provide customized solutions to the most challenging international sampling events. Our primary shipping partner for the past 20 years has been FedEx International, and we also utilize DHL for more remote portions of our service area.

TestAmerica's international logistical support includes all the paperwork that is necessary to quickly and safely ship samples back to the United States. Our dedicated team of international logistics experts can assist clients with common challenges, such as:

- Regulations barring the shipment of preservatives, even in Limited Exempt Quantities.
- Difficulties identifying a shipper willing to ship known hazardous substances of "free" product.
- Coordinating the shipment of short hold time samples to the lab (<48 hour holding time).

Certifications and Accreditations

Quality laboratory services are not always available in every country, especially in remote areas. In order to meet the rigorous quality requirements of many sampling efforts, it becomes necessary to seek a laboratory outside of the region in which the samples were taken. TestAmerica maintains ISO 17025:2005 certification through A2LA, AIHA or LAB at many of our locations. In addition, most labs hold USDA Foreign Soil Permits and a US Fish & Wildlife license.

Deliverables that are Easy to Use

TestAmerica's network of laboratories across the nation are connected by a single laboratory information management system (LIMS). This interconnected LIMS allows for the creation of one comprehensive report and electronic deliverable, regardless of analysis location, saving our client's time and reducing costs. In addition, our library of more than one thousand electronic data deliverable (EDD) formats mitigates the risk of errors associated with manual data entry. Spanish language reports are available to meet the requirements of regulators throughout the Americas and the Caribbean.

TotalAccess® On-line Data Delivery

TotalAccess®, TestAmerica's 24/7, online data delivery solution, allows clients to track all aspects of their environmental data program. Offered as a value added service to all of our clients, TotalAccess® includes the following time and cost saving features:

- Rapid access to data and deliverables for real time decision making.
- Customizable EDD creation with comparison of results to preloaded regulatory standards.
- Data trending capabilities by sample and analyte.
