

Analytical Services for the Oil and Gas Sector

TestAmerica has extensive experience offering environmental testing services to companies in all vertical segments of the Oil & Gas industry including upstream, midstream, downstream and retail.

Our network of laboratories has provided more than 2 million routine and specialty analyses to support the environmental testing needs of clients in the sector. Value added services include:

- Easy to use data reports and electronic deliverables
- Courier and logistics services
- Secure access to real-time information via TotalAccess®, TestAmerica's 24/7 online data portal
- Emergency testing programs for small and large incidents

Routine Testing

TestAmerica provides fast and reliable laboratory testing data for a broad range of testing programs such as:

- NPDES permits
- groundwater monitoring
- waste characterization
- Brownfield development
- source emissions
- fenceline monitoring
- industrial hygiene monitoring
- TENORM
- product and characteristic testing
- fracking
- incident response

Certifications in all states allow TestAmerica to provide unmatched capacity for routine analyses.

Oil & Gas Sector Testing

TestAmerica's laboratory services offer clients a single source solution to their testing needs, reducing cost and risk.

Petroleum Hydrocarbon Testing

Standard 8015 DRO and GRO methods, along with state specific TPH methods, are available throughout our network. In addition, TestAmerica offers Product and Characteristic testing support.

Air Monitoring

TestAmerica offers a broad range of capabilities for ambient air monitoring and source emissions testing, including support for Benzene Fenceline Monitoring.

Radiochemistry Testing

Testing for NORM and TENORM has been available for more than a decade. Capabilities include:

- Gamma Spec
- Total and Isotopic Uranium and Thorium
- Gross Alpha/Beta
- Radium 226
- Radium 228
- Lead 210

Industrial Hygiene Monitoring

TestAmerica's industrial hygiene laboratories are AIHA LAP accredited for the analysis of liquid, mist, fume, vapor, gas or dust samples.

Hydraulic Fracturing

TestAmerica's Shale Sustainability Program is a turnkey solution, providing environmental testing and associated tools to manage environmental risks throughout the life cycle of a well.

Upstream Exploration and Production

Our upstream program includes testing for water, gas, produced and flowback water, drilling residuals, ambient and source air emission

samples. Properly addressing potential issues stemming from both naturally occurring constituents of concern and those introduced in the drilling process, as well as high levels of dissolved salts and turbidity, ensure high quality, legally defensible data.

Midstream Distribution

Analytical testing services for the midstream market must be agile and scalable to meet the needs of customers distributing crude oil, refined petroleum and other related products. TestAmerica's industry leading network of 80 locations throughout the nation provides support for real estate transfers, waste characterization, remediation and air emissions, with support for various states' unique hydrocarbon methods. TestAmerica also provides emergency testing programs for small and large incidents.

Downstream Refineries

Refinery operators face many environmental compliance challenges, requiring monitoring programs for the surrounding water, soil, sediment, waste and air.

Our comprehensive suite of environmental testing services for the downstream sector includes discharge monitoring, groundwater monitoring, storm water monitoring, source emissions testing, benzene fence line monitoring, industrial hygiene testing, ambient air, waste characterization, site investigations and remedial action support.

Retail and Distribution

TestAmerica provides a full suite of services to the retail petroleum market including logistics support for sampling kits and sample pickup, a broad array of state hydrocarbon methods, air testing for petroleum vapor intrusion, waste characterization, site investigations and remedial action support.

Supporting the Quality You Demand, the Consistency You Seek, and the Value You Expect.
